INTRODUCTION

This is the second **AviList** edition of the checklist of The Birds Of South Gloucestershire (TBOSG) and has been prepared reflecting the status of species and subspecies believed to have occurred in a naturally wild state within the recording area.

The South Gloucestershire Systematic List follows the conventions of The BOU British List: A Checklist of Birds of Britain (**AviList**) which came into effect on January 1st 2026.

THE LIST

The South Gloucestershire List is under continuous review; species and/or subspecies are added or removed following rigorous assessment. Changes to the list are adopted with immediate effect.

TAXONOMY

In 2026, following a detailed review TBOSG has adopted, from the 1st January, the International Ornithological Congress (IOC) World Bird List - **AviList** (a global collaboration to produce a single current consensus taxonomy for the birds of the world), for all its taxonomic needs.

SPECIES/ subspecies NAMES

The South Gloucestershire List uses the English names for species and subspecies used by the IOC World Bird List (**AviList** 2026).

CATEGORIES

- A: Birds recorded in the UK in an apparently natural state at least once since January 1st 1950.
- B: Birds recorded in the UK in an apparently natural state at least once between January 1st 1800 and December 31st 1949, but not subsequently.
- C: Birds that, although introduced, now derive from the resulting self-sustaining populations.

THE SOUTH GLOUCESTERSHIRE SYSTEMATIC BIRD LIST

Each taxon is headed followed by the vernacular and scientific name, date of the first documented reference, location and finder(s) - species are in UPPERCASE.

The list, as of JUNE 1st 2026, stands at 350 - 307 species and 43 subspecies believed to have occurred naturally in the recording area.

All sightings of rare and scarce birds are subject to ratification by the appropriate rarities committee!
